

FEATURES

- **VERSATILE DESIGN:** Barbee's new Muffler System can be used for both air and water testing of relief valves, with a built in water separator with drain.
- **PORTABILITY:** Muffler has a built in cart with stabilizing frame, adjustable height and swivel casters with brakes.
- **EASE OF USE:** Special designed flanged adapters with seals and quick release clamps makes changing flanged adapters easy and efficient.

Barbee's new Muffler System was designed with the customer's needs in mind. It is capable of reducing exhaust air and water from the relief valves during testing. The muffler system reduces air blasts with a 20-30 decibel reduction, depending on the size of the valve and the test pressure.

Various size adapter flanges are easily clamped in place with the valve to the muffler intake tube. To prevent release of the adapters from the muffler during the exhaust blasts, a safety chain is used, along with clamps to the flange of the valve being tested.

This system can be used on any new or existing Barbee Relief Valve Tester with little or no modifications.
